SYSTEMS AND METHODS FOR DETECTING AND RESOLVING RESOURCE CONFLICTS

Attorney Docket No. 13768.119

Attorney: Rick D. Nydegger/Adrian J. Lee

Today's Date: January 16, 2003

In preparation for a requested Examiner Interview, and as requested by the Examiner, Applicants propose the following agenda:

1. (Amended) In a system capable of replicating a server copy of a resource stored on one or more servers with a client copy of the resource stored on one or more clients, a method for resolving a resource conflict comprising the steps of:

detecting, by the server, that the resource on the server conflicts with the copy of the resource on a client;

determining, at the server, whether the server can resolve the conflict between the resource and the copy of the resource [can be resolved] into a single version of the resource;

creating, by the server, a conflict resource, if the conflict cannot be resolved at the server;

evaluating, at the client, whether the conflict can be resolved into the single version of the resource in accordance with a schema of the client if the conflict was not resolved at the server; and

presenting the conflict resource to a user if the conflict resource cannot be resolved by the client.

Any questions regarding this proposed agenda can be directed to Rick D. Nydegger/Adrian J. Lee at (801) 533-9800 (phone) or (801) 328-1707 (fax).
